PDF AI Chatbot - FAQ

Frequently Asked Questions

Q: What is this chatbot?

A: This is an AI-powered chatbot that can answer questions based on PDF documents using local language models running entirely in your browser.

Q: How does it work?

A: The chatbot uses transformers.js to run language models directly in your browser, ensuring complete privacy and no external API calls. It processes PDF content and uses semantic search to find relevant information.

Q: Is my data secure?

A: Yes! Everything runs locally in your browser. No data is sent to external servers, ensuring complete privacy and security of your information.

Q: What kind of questions can I ask?

A: You can ask any questions related to the content of the PDF document. The AI will search through the document and provide relevant answers.

Q: How accurate are the responses?

A: The accuracy depends on the quality of the PDF content and how well your question relates to the information in the document.

Q: What browsers are supported?

A: Modern browsers that support WebAssembly and WebGL are supported, including Chrome, Firefox, Safari, and Edge.
